

WSP OPTIMIZATION PACKAGE WORKSHOPS

Workday Extend:

Explore Common Design Patterns
WSP Workshop Prework

To prepare for the WSP Workshop, please complete the following pre-work to help guide you through the activities planned for each session.

Pre-Workshop Tasks

1: Identify System Pain Points

☐ Reflect on your system pain points.

1. Review key operational pain points in your business that are suitable for Workday Extend.
2. Check whether your identified pain points relate to any of the following scenarios. If so, determine which scenario causes the most frustration, delays, or performance issues in your daily workflows:

    a. **Search and Data Retrieval Issues**

    - *Signs:* Users complain about slow page load times or system freezes when pulling up reports or lists.
    - *Examples:* The system freezes whenever opening a main records page because it attempts to load all data at once, or users struggle to find specific items without required filter parameters.

    b. **Tedious Data Entry and Navigation**

    - *Signs:* Workflows require excessive clicks, frequent page jumps, or blind selection steps where record details are hidden until navigating away from the main list, forcing repetitive manual updates for routine information.

- *Examples:* Users select an item from an instance list without seeing its context, navigate to a new page to review its details, and then perform the edit before returning to start the process over for the next record.

c. **Data Ingestion and Extraction**

- *Signs:* Users must leave Workday to manually look up context or details in an external system, rather than viewing all necessary information directly on a single page.
- *Examples:* Navigating away from Workday to check an external vendor portal for real-time status updates, data retrieval, or record verification before completing a task.

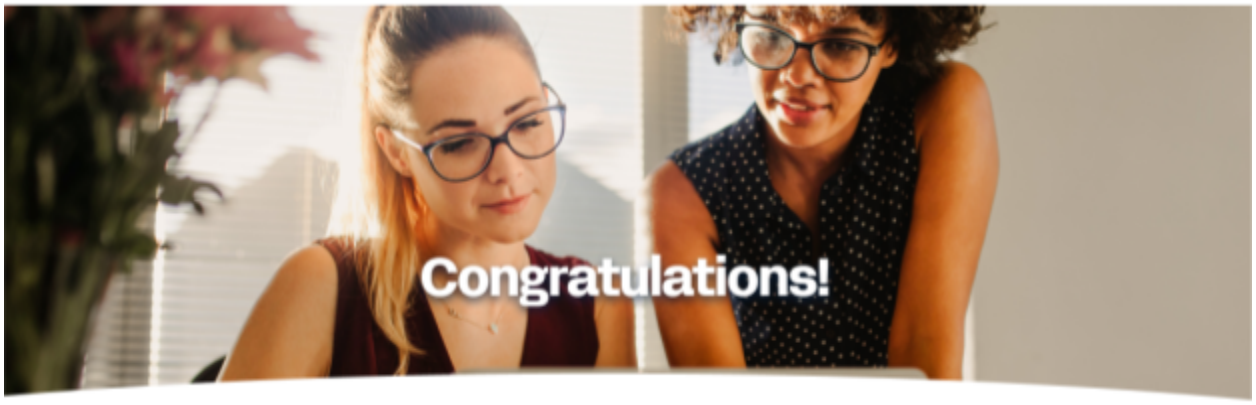

2: Document Your Business Scenario

☐ Document your primary business scenario for the workshop.

- Select **one specific process or pain point** from your daily work that matches one of the three scenarios above (**Search and Data Retrieval Issues, Tedious Data Entry and Navigation, Data Ingestion and Extraction**). You will be using it for activities in the workshop.
- If your pain points do not match any of the above three scenarios, make a note to bring this up during the introduction section of the workshop.

3: Confirm Development Access

☐ Confirm access to your Workday Extend developer site and development tenant.

You have completed your Workday Extend: Explore Common Design Patterns Workshop Prework.

Don’t forget to save your materials. We’ll see you at the workshop.
